Tech Innovations Pvt. Ltd.

D-307, Ganesh Glory 11,Gota, Ahmedabad-382470

Experience: 2-3 Years

Job Type: Full-Time
Vacancies: 1

How to Apply:
https://forms.gle/jVW7D1o8aUN5JSePA
You can share your CV at aarohi@ealphabits.com

Key Responsibilities

• Develop and deploy machine learning models for classification, regression, and predictive analytics.
• Perform data preprocessing, feature engineering, and exploratory data analysis (EDA).
• Build and optimize NLP models including text classification using Word2Vec, TF-IDF, or embeddings.
• Work with structured and unstructured datasets to extract meaningful insights.
• Collaborate with cross-functional teams to understand business problems and translate them into data solutions.
• Monitor model performance and retrain models as required to improve accuracy.
• Prepare data visualizations and dashboards to communicate insights to stakeholders.
• Ensure data quality, consistency, and integrity across projects.

Required Skills & Experience

• 2–3 years of experience in Data Science / Machine Learning roles.
• Strong knowledge of Python and libraries such as NumPy, Pandas, Scikit-learn.
• Experience with NLP techniques including Word2Vec, text preprocessing, and similarity models.

• Hands-on experience with machine learning algorithms (Logistic Regression, Random Forest, SVM, etc.).
• Knowledge of data visualization tools (Matplotlib, Seaborn, or Power BI).
• Understanding of model evaluation metrics such as Accuracy, Precision, Recall, and Confusion Matrix.
• Experience working with large datasets and SQL.

Preferred Qualifications

• Experience in deep learning frameworks like TensorFlow or PyTorch.
• Familiarity with deployment tools such as Streamlit, Flask, or FastAPI.
• Strong analytical and problem-solving skills.
• Excellent communication skills for presenting technical findings to non-technical stakeholders.
